

the company

fpe Hydraulik GmbH is a specialist hydraulics company with headquarters in Hohenstein-Ernstthal and a branch in Langenfeld (Rhineland), Germany, founded in 2012. We have been on the market since 1991 and have over 45 employees, generating a turnover of more than € 9 million per year. Our main areas of expertise are the repair and sale of pumps, motors, cylinders, control blocks, valves and pressure accumulators, the design and manufacture of hydraulic units and systems and on-site service for hydraulic systems.

repair

• pumps and motors

repair with original spare parts

• cylinder

repair, new production and reproduction of complete cylinders or individual assemblies

• accumulators

periodic inspection according to the pressure equipment directive in our house or on site, as well as bladder and seal replacement

• valves and control blocks

reconditioning, sealing or new delivery of complete valve blocks

customer service

We undertake on-site troubleshooting and measurement in stationary and mobile hydraulics as well as comprehensive maintenance of hydraulic systems including removal, installation and commissioning.

the quality

After repairs have been completed, all pumps, motors and cylinders are tested and adjusted on our test benches according to the manufacturer's specifications.

projects

We develop new systems and units in close cooperation with you. From the idea to commissioning, you always have a contact person.

We convert or upgrade existing systems so that they once again comply with technical, economic and safety-related regulations.

technical sales

Advice from our field and office technicians. Application-oriented product design and delivery. We supply hydraulic components from almost all manufacturers, just ask us. We stock the most common products from the manufacturers: Danfoss, ENERPAC, Hennlich, RSV Rotator and Rotary Power and they are immediately available.

test bench data:

pressure up to 500 bar
flow rate up to 800 l/min
speed up to 4000 U/min
500 kW (680 PS) pure test power
700 kW (950PS) system power
